# Biofresh OZ80

The **OZ80** is a system for managing ozone able to control the development of the spores and main good air quality within an environment

**Ozone** is able to restore the air of an environment through the disintegration of the cells of biological agents such as viruses, enzymes, bacteria, fungi, etc.

The unit is equipped with easy to read sensor management with flow regulator and display.

Possibility to integrate the system with other devices and / or equip it with timer operation

The **OZ 80**, being equipped with sensor control and management of the concentration is a device that can also be used in the presence of company personnel

The generator can be installed in the technical room and the spread is guaranteed through Teflon tubes. The management is guaranteed by the display that can be installed in remote position with respect to the system.
